

Glass Innovations, Inc.

Modern Solutions/Classic Values

at **GLASS INNOVATIONS** we custom design and install frameless shower glass and quality framed shower enclosures. We are confident in meeting your needs offering a variety of glass thicknesses, textures and methods of installation to accommodate both aesthetics and your remodel budget. Consider our in house glass etching capabilities to compliment your bathroom motif. Glass Innovations has a consistent track record of exceptional quality and reliability you can depend on.

We operate our business on the principals of honesty, trustworthiness and quality; giving each customer personal service and the attention to detail they deserve to create an innovative and embellished beautiful environment.

Glass Innovations' team consists of diverse experiences in art and glass work. Our history includes skills such as: sculpture, ceramics, woodworking, photography, drawing, painting, screen printing, graphic design, sandblasting, slumping, and casting glass. We are committed to providing truly unique, custom, handcrafted glass products for commercial and residential use. We utilize our knowledge, resources and craftsmanship to bring each individuals custom glass project to reality.

PRODUCTS AND SERVICES

Framed & Frameless Shower Enclosures

A close-up photograph of a modern shower enclosure. It features a light-colored, solid countertop with a glass panel supported by chrome cylindrical posts. A chrome handle is visible on the glass panel.

PAGE 2-8

Glass Handrails

A photograph showing a glass handrail system installed in a modern interior. The handrail consists of a clear glass panel held in place by chrome brackets and is mounted on a wall. The background shows a brightly lit room with pendant lights.

PAGE 13

Coated Glass Countertops

A photograph of a curved, dark-colored countertop made of coated glass. On the countertop, there is a wooden cutting board, a glass hourglass, and a modern chrome faucet over a sink. The background shows a window with a view of greenery.

PAGE 14

Sand Blasting Imagery & Design

A photograph of a large, dark, textured wall or panel. The words "VETERANS MEMORIAL" are prominently displayed in a light, embossed font. Below the text, there are several glass panels containing text, likely names of veterans, which have been sandblasted into the surface.

PAGE 15

Light Commercial

A photograph of a modern office space. The office is enclosed by glass walls and features black ergonomic office chairs and a light-colored wooden desk. The lighting is bright and even.

Shower Glass Cautions & Cleaning

PLEASE DO NOT USE YOUR SHOWER FOR AT LEAST 24 HOURS AFTER INSTALLATION IF SILICONE HAS BEEN USED TO ALLOW TIME TO PROPERLY CURE.

CARE AND CLEANING

Most hardware is solid brass construction and comes with a 3 year manufacturers' warranty against defects. Hardware should be cleaned using soft cloth and mild cleanser and water.

*** IMPORTANT:** Do Not Use Harsh Chemicals or cleaners that contain ammonia or abrasives

We apply a protective coating to the interior surface of our shower glass to resist permanent damage caused by hard water and soap scum. The best way to protect your glass is not allow build up to occur by regularly cleaning your glass. It is recommended to squeegee your shower glass with the squeegee provided on a daily basis after showering. Designate this squeegee for your glass only. Weekly cleaning is recommended, for best results use an alcohol based glass cleaner and microfiber towel. For an additional cost factory applied protective coatings are also available if desired, whether it be for peace of mind or if your water is evil.

If you have a hinged glass door the sweep on bottom is removable for cleaning or replacement. It is recommended to remove and wipe out the sweep channel with a paper towel and rubbing alcohol until clean and snap back into place with drip rail toward the interior of shower. Clean vertical seals by gently wiping with mild detergent and water and soft cloth, pulling down on the seal can cause it to tear.

SHOWER DOORS ARE NOT WATERTIGHT

Shower enclosures, when properly installed, are designed to prevent leaks under normal shower conditions. Excessive water pressure or directing the shower spray directly at the door do not represent normal shower conditions and can result in leaks.

*** IMPORTANT:** We are responsible for our shower glass installation, however we are not responsible for what happens before we get there, for example your shower curb should have a proper slope into the shower, this is a very important step (No pun intended)! A shower curb that is level or sloped out will leak. Also improper tile setting techniques that leave voids in the thin set behind the tile or lack of adhesion to the substrate will result in a cracked tile if we need to put a hole or holes there.

SAFETY

This is a glass door, it is recommended you keep a hand on the handle, knob, recessed pull or door during the entire opening and closing process to prevent the door from hitting and damaging an adjacent wall or slamming closed into the strike seal with excessive force. Excessive force may cause glass to shatter.

WE STAND BEHIND OUR WORK! IF YOU HAVE ANY QUESTIONS OR ADJUSTMENTS NEEDED IN REGARDS TO YOUR SHOWER PLEASE GIVE US A CALL.
